

Lovable and Bolt app: production-readiness checklist

15 checks to tick before real users and real money arrive. Many take minutes. Each one is explained, with the fix, at app369.com.

DATA ACCESS

- ☐ **User B can't see or change anything of user A's, on any screen.**
Create two test accounts yourself (never use real customers' accounts), sign in as each in two browsers, and try every screen that shows private data.

- ☐ **Every table has row-level security on, and no policy is always true.**
Lovable: run the Deep scan and read every finding. Bolt: the Security tab of Bolt Database. Your own Supabase project: the Security Advisor.
Supabase RLS policy checker: <https://app369.com/tools/supabase-rls-policy-checker/>

- ☐ **Server functions check who is calling.**
Call each function signed out, then as a normal user for an admin-only action. On Lovable or Supabase, also look for `verify_jwt = false` in `supabase/config.toml`.

- ☐ **Storage buckets with user files are private.**
Open a user's file URL in a private window. It should fail.

- ☐ **If the app uses your own Supabase project: new tables have the grants Supabase needs since October 30, 2026.**
Paste your newest migrations into the free grants checker.
Supabase grants and RLS checker: <https://app369.com/tools/supabase-oct-30-checker/>

SECRET KEYS

- ☐ **No `service_role`, `sb_secret_` or `sk_live` key in the code or in the JavaScript the live site loads.**
Search the code view in Lovable or Bolt and the live site's page source for these, including `VITE_` variables, or ask your developer to.

- ☐ **Any key that was ever exposed has been rotated, not just deleted.**
Create a new key at the provider, update the app, then revoke the old one.

SIGN-IN AND EMAIL

- ☐ **The Site URL and the redirect allow list are your live domain.**
Sign up with a fresh address on the live site and run Forgot password end to end. The links should open the live site, not localhost.
Auth emails link to localhost: <https://app369.com/fix/supabase-auth-email-links-localhost/>

- ☐ **Sign-up and reset emails actually arrive.**
On Bolt, emails need your own Resend API key. Send yourself a test from the live site.

PAYMENTS

☐ **Paid users get access from the Stripe webhook, not from the success page.**

With test-mode keys and Stripe's test card 4242 4242 4242 4242, pay, close the tab before the success page loads, and check the account was upgraded.

Paid but not upgraded fix: <https://app369.com/fix/stripe-paid-but-account-not-upgraded/>

☐ **The webhook checks Stripe's signature.**

Ask your developer to show that a request with a wrong signature is rejected, tested with test-mode keys only.

Webhook signature fix: <https://app369.com/fix/stripe-webhook-signature-verification-failed/>

☐ **Production uses live keys and live IDs only.**

Check that no test customer or price IDs are saved where the live keys are used.

DEPLOY AND YOUR DATA

☐ **The live site matches the preview, and refreshing any page works.**

Open the live URL in a private window after every change, then open a deep link such as /dashboard and refresh it.

Page not found on refresh fix: <https://app369.com/fix/page-not-found-on-refresh-netlify-vercel/>

☐ **Hosting limits won't take the site down at launch.**

Check usage and the spending limit in your account settings. On Bolt, publishing fails above 100MB, so keep large images and video elsewhere.

Build fails on Netlify or Vercel: <https://app369.com/fix/bolt-lovable-build-failed-netlify-vercel/>

☐ **The project is on GitHub, and you have exported and opened a copy of your data.**

Reverting code doesn't undo database changes, and removing Lovable Cloud permanently deletes the database.

On Lovable, agree which branch it edits before anyone else pushes.

Want it checked for you?

The AI App Launch Check is \$450, fixed price. You get a written report in 3 business days from read-only access, each issue rated critical, high, medium or low, with evidence.
